

Maintenance Manager

provides electronic scheduling and management of tasks for all laboratory equipment.

Maintenance Tasks... can include calibration, reagent loading, and field service, as well as user-defined tasks for every unique lab situation. General maintenance for interfaced analyzers can be created as tasks within Maintenance Manager. In addition, tasks associated with non-interfaced equipment can be created and documented, such as the recording of a refrigerator's temperature.

Tasks can be scheduled on a regular interval or performed on an as-needed basis. Scheduled tasks can be reviewed on a user-friendly calendar, providing users a list of tasks coming due. The enhanced Notifier feature can also alert users and supervisors to tasks that are due, as well as tasks that are overdue or complete. Completed tasks are documented, allowing laboratory personnel to more efficiently organize lab maintenance requirements.

Automated Troubleshooting... uses pass/fail logic to assist with the performance of laboratory equipment maintenance, and can define steps to take in the event of a failure. All laboratory procedure documents can be linked as attachments, including vendor instructions, website links, and movie clips, providing instruction and guidance during the performance of tasks.

Supervisor Sign-Off... on tasks and the easy printing and archiving of maintenance logs eliminates the need for written logs, yet allows full traceability in the event of an audit.

Maintenance Manager allows laboratories to simplify, control and better document their maintenance activities to ensure high quality standards and increased workflow.

Fast Facts: Maintenance Manager...

- Supervisor Sign-Off
- Maintenance Log Archiving
- Notifier Event Utilization
- Links to Laboratory Procedures
- Unlimited User-Definable Tasks

Data Innovations offers the most comprehensive Middleware system in the market to manage laboratory operations, including pre-analytical, analytical, and post-analytical sample processing and non clinical tasks such as equipment maintenance and specimen archiving. Instrument Manager™ (IM), the Gold Standard in Middleware, is available independent of instrument or LIS vendor, laboratory department, and clinical discipline.
