

Reduce time to find a sample by an average of 60%

No matter how complicated the footprint of your lab, Data Innovations' middleware opens the opportunity for improving workflow efficiency and helping you find stored samples with speed and accuracy.

Vendor independent ... work area independent ... sample type independent ... our Specimen Storage and Retrieval (SSR) system delivers on all these and more. SSR simplifies and organizes your sample storage to bring sample storage and retrieval under control.

Is your lab **IM**powered™ ?

Works in any environment – even Multi-Sites

SSR can be networked throughout all your laboratories or used as a stand-alone in a specific work area. However you choose to use it, SSR tracks each sample, who logged it in or out and where it is. So, when a physician is on the phone and wants to know if there's enough sample left for more testing, you can answer immediately – usually finding the sample in under 60 seconds.

- Single, networkable sample storage and retrieval solution for your entire enterprise
- Store, organize and retrieve any sample type (urine containers, cups, slides, tubes, etc.)
- Notifies tech of pending tests before storing a sample
- Search by Patient ID, Sample ID, or patient name with wildcard searches
- Distinguishes different sample types in non-unique sample ID environments
- ROI in weeks or months
