

Maintenance Manager Solution

Organizes, schedules, reminds & documents
for compliance for all equipment

In today's environment where labs are expected to deliver real-time results with a low percentage of errors, spending hours ensuring regulatory compliance can be a drain on an already overworked labor pool. But you know it's a part of doing business. That's where Data Innovations comes in. We make compliance easier with our extremely easy to use Maintenance Manager application. Feel confident that your maintenance records are complete, approved and electronically available even during last minute inspections. Maintenance Manager helps you by:

- Providing electronic scheduling and documentation management for all your lab equipment
- Presents steps to take while troubleshooting equipment in your lab
- Providing instruction and guidance during the performance of tasks

Additional features of Maintenance Manager include:

- Networkable, electronic maintenance tracking and reminder system for all laboratory equipment
- Reminders based on time, number of tests performed (such as reagent bottle change) and more
- Guides users on proper procedures and incorporates failure logic
- Ability to document 'unscheduled' activities such as service repair for instrument failure
- Supervisor approval and tracking
- Electronic archiving of maintenance logs eliminating paper-based files

Get Notified

Data Innovations offers a variety of solutions to your most intractable challenges; solutions that will make your lab run smoother and more efficiently. With Data Innovations' unique, powerful Notifier application, your flagged events automatically integrate with Maintenance Manager.
