

Omni-Assistant Lab Quality Management System

End-to-End QMS for Quality, Compliance, and Risk Management

Are you ready for your next audit? It's a question that can raise the pulse of even the most seasoned laboratorian.

Everyone in the lab recognizes the need to meet, manage, and master strict regulatory requirements, risk management needs, and compliance concerns. But, disparate tools, manual tracking, and lack of visibility can create complexity, more work, and increased risk.

Omni-Assistant Lab QMS - used by more than 275,000 healthcare professionals worldwide - integrates healthcare accreditation and regulatory standards with sophisticated Quality, Compliance, and Risk Management capabilities to ensure your lab is always inspection ready.

Why Omni-Assistant QMS?

- 1 **Single, integrated platform for end-to-end QMS needs**
- 2 **Automates management of 120+ standards and accreditations checklists, including: CAP, CLIA, ISO 15189 and ISO 17025**
- 3 **Spans management of Personnel, Policies & Procedures, Facilities & Equipment, and Quality Assurance Program**

Comprehensive Quality, Compliance, and Risk Management

Omni-Assistant Lab QMS lets your lab create and manage automated, digitized, and transparent Quality, Compliance, and Risk Management processes that reduce risk, save time, and let lab staff focus on what matters most.

Built on the Omni-Assistant Core – a robust integration and workflow engine foundation – Omni-Assistant Lab QMS provides end-to-end, fully integrated capabilities to allow lab quality leaders to stay up-to-date and in-the-know, while proactively evaluating risk and implementing necessary precautions to reduce the potential for harm.

Omni-Assistant Lab QMS includes more than 10 fully integrated modules to allow labs to manage Quality, Compliance, and Risk Management needs agilely and proactively.

Quality: Powerful capabilities for seamless automation of clinical documentation and processes:

- Anytime, anywhere access
- Compliance with accreditations and regulatory requirements

Compliance: Compliance engine for enhanced quality:

- Reduced errors
- Improved process standardization
- Process optimization with lab best business practices

Risk Management: Efficient Risk Management assessment tools to effectively:

- Identify, measure and implement controls for risk mitigation
- Improve staff safety
- Reduce risk associated with additional patient treatment or extended stay

Key Benefits

Digitization and automation of clinical documentation for anytime, anywhere access

Major time savings and improved resource utilization

Enhanced quality, reduced errors, and improved process efficiencies

Reduction in CoPQ (Cost of Poor Quality)

Ready for Omni-Assistant Lab QMS to automate and accelerate QC compliance across the lab?
